
Ermysted's Grammar School, Skipton

Client: Ermysted's Grammar School

Architect: John and Jennifer Wharton

MSJ Commission: Full service

Ermysted's Grammar School required an extension for use as Craft, Design and Technology Workshops and Classrooms.

The extension was adjacent to the existing school buildings and the new building was on a sloping site, which required basements below the ground floor.

The foundations were cast on a boulder clay formation and the structure was steel framed with p.c. floors. The ground floor laboratories were generally open plan thus large long span beams were required.
